

How to Get the Homeowner Signed

U.S. Shingle & Metal · 5 easy steps, right there at the door

1

Fill out the inspection form on your phone, then tap "Send to homeowner."

2

Show them the QR code on your phone.

Have the homeowner point their phone camera at it — the agreement opens on THEIR phone. (No camera? Tap "Copy link" and text it to them.)

3

Your phone now shows a 6-digit code. Read it out loud to them.

As soon as they open the link, the code pops up on your screen.

4

They type that code into their phone.

This confirms it's really them — no waiting on a text.

5

They check the box, sign, and tap "Sign & submit." Done.

It lands in JobNimbus automatically. If their screen still says "You're not done yet," they haven't tapped Sign & submit.

Nothing gets texted or emailed to the homeowner — the code lives on YOUR phone. That's why this always works, even with bad signal or spam filters.

The homeowner always signs on their OWN phone — that's what makes the signature hold up.
